DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 15-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Sanyo (JP 57-204754).

Sanyo discloses a heat pipe (see Figures and English language title) that would be capable of use in extracting heat from a semiconductor light source, the heat pipe including a transparent member (6 and 21 in Fig. 1) formed of a thermally conductive material and defining an optical transmission path therethrough, the heat pipe being capable of being located proximate to the active region of a semiconductor device to extract heat when in use, the optical transmission path is provided by means of a channel which runs through the heat pipe (Fig. 1), the channel being arranged to receive optical transmission means (Fig. 1), the transparent and translucent member comprises a hollow pipe with sealed ends (Fig. 1), the heat pipe being at least partially filled with a cooling liquid (Fig. 1).

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 20 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanyo (JP 57-204754) in view of Hamilton (5,852,339).

Sanyo discloses a transparent heat pipe as claimed, but it is unclear whether Sanyo teaches the use of a partial vacuum in the tube and a capillary material. Hamilton discloses the use of a partial vacuum (col. 5, lines 23-25) and a capillary material (col. 5, lines 40-43) in a heat pipe. It would have been obvious in view of Hamilton to use a partial vacuum and a capillary material in the heat pipe of Sanyo, the motivation being to obtain improved operation of the heat pipe.

5. Claims 22-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanyo (JP 57-204754) in view of Kurikhin (SU 1035400).

Sanyo discloses a transparent heat pipe as claimed, but does not appear to disclose optical fibers disposed in the channel. Kurikhin discloses the use of optical fibers disposed in the channel of a heat pipe. See the English language abstract. It would have been obvious in view of Kurikhin to use optical fibers in the channel of the heat pipe of Sanyo, the motivation being to obtain improved light transfer in the heat pipe.

6. Claims 26-28 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanyo (JP 57-204754) in view of Masami et al (4,729,076).

Sanyo discloses a transparent heat pipe as claimed, but does not appear to disclose the heat pipe being used in combination with a semiconductor light source. Masami et al disclose the use of a heat pipe in combination with a semiconductor light source. See the abstract. It would have been obvious in view of Masami et al to use the heat pipe of Sanyo in combination with a semiconductor light source, the motivation being to obtain improved cooling of the light source.

7. Claims 29 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanyo (JP 57-204754) in view of Masami et al (4,729,076) and further in view of Kurikhin (SU 1035400).

Sanyo in view of Masami et al discloses a transparent heat pipe in combination with a semiconductor light source as claimed, but does not appear to disclose optical fibers disposed in the channel. Kurikhin discloses the use of optical fibers disposed in the channel of a heat pipe. See the English language abstract. It would have been obvious in view of Kurikhin to use optical fibers in the channel of the heat pipe of Sanyo in view of Masami et al, the motivation being to obtain improved light transfer in the heat pipe.

8. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 9. Claim 31 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 31 is inconsistent with claim 15, from which it depends. It has be assumed for purposes of this office action that claim 31 was intended to depend from claim 28.
- 10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Diamond Denki (JP 2000-353892), Eastman, Itoh, and Logan et al are cited to show relevant cooling structures.
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa J. Walberg whose telephone number is 571-272-4790. The examiner can normally be reached on M-F 8:00 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on 571-272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
